

INVITATION

Sulzer at Sulphur + Sulphuric Acid

November 9 – 11, 2020 | Virtual Conference & Exhibition (open 24/7)

Join us for online virtual exhibition at Sulphur'20 to find out more about possible collaboration opportunities and to learn how we can develop your processes together.

Pumping of sulphuric acid is very demanding, and the severely corrosive conditions affect the lifetime of the equipment. Our innovative VAS vertical acid pump is especially designed for sulphuric acid media. Its engineered design ensures high corrosion resistance and longer service lifetime. With our new Sulzer Sense wireless condition monitoring solution, you can take care of your equipment in an easy, safe and smart way.

We look forward to your visit!

Our experts are available for you every day 8 a.m – 6 p.m (Central European Time / UTC+1)
