Sulzer authorized Service & Repair Center for ATB Laurence Scott motors

Sulzer has been awarded the status of Approved Service & Repair Center for ATB Laurence Scott (ATB LS), the center of excellence for the design and manufacture of mid and high voltage induction motors. With such a large installed machinery base, the manufacturer is keen to ensure that all of its customers receive the highest level of maintenance service. By selecting one of the world's largest independent service and maintenance providers for rotating equipment it is confident this goal will be achieved.

Effective immediately, the agreement allows for a year-on-year extension. Both ATB LS and Sulzer believe this demonstrates the long term commitment and is testament to the strong, collaborative working relationship, whilst providing a high standard of service delivery. The agreement also allows for an exchange of technical, engineering and manufacturing data.

Keith Osbourne, After Sales Manager at ATB LS explains: "We have the unique ability to provide customers with over 100 years of technical expertise in fields as diverse as Processing, Manufacturing, Oil and Gas, Petrochemicals, Water, Sewage, Mining, Nuclear, and Defense environments. Coupled with Sulzer, one of the leading independent service providers for all brands of rotating equipment, including turbines, pumps, compressors, generators, and motors we will give our customers the best possible support with rapid response and quick turnarounds, whilst helping to reduce maintenance costs and increase availability of machinery."

ATB LS and Sulzer operate in very similar industrial areas and are both extremely experienced in mechanical and electrical equipment, with both companies having very high standards in product quality and reliability. As such, the decision by ATB LS to select Sulzer as an authorized repairer has been based on Sulzer's expertise and worldwide service network. Both will continue to work closely with the network of OEMs, EPCs, Operators and End Users with routine and maintenance works respectively.

Initially, the agreement will cover the United Kingdom and UK sector of the North Sea Oil & Gas facilities but with the excellent trading relationships with Sulzer and ATB LS, it is envisaged that the agreement will expand to encompass Sulzer's global network of facilities.

Sulzer, headquartered in Winterthur, Switzerland, since 1834, specializes in pumping solutions, rotating equipment maintenance and services as well as separation, reaction, and mixing technology. The company creates reliable and sustainable solutions for its key markets: oil and gas, power, and water. Sulzer serves customers around the world through a network of over 170 production and service sites, and it has a strong footprint in emerging markets. In 2015, the company achieved sales of roughly CHF 3 billion with around 14 000 employees. www.sulzer.com
