

Carry case J 12

General

Time is the most critical factor in situations calling for a dewatering solution. Sulzer offers a carry case for a fast, easy and safe installation.

The carry case is simply lifted off a truck and brought to where it is needed. For emergencies, all equipment needed on site can be stored on the carry case; such as pump, discharge connection, hose, couplings, lifting rope and extra accessory for low level pumping. When pumping is ended it is easy to put parts back in the carry case and safely bring it back to the truck or to the next site.

Application

The carry case offers:

- Fast and easy installation
- Ergonomic handle makes it easy to carry and safe to lift off a truck.
- Sturdy frame protects equipment during transport and simplifies storage.

Carry case - part number 00831704
