

BioFlux™ - Enabling refineries to process biobased feedstock

Achieve a competitive advantage.
BioFlux Technology offers the fastest path from investment to profit in SAF.

Transition to SAF production presents both significant opportunities and challenges. Traditional refiners face complex decisions about technology selection, operational integration, and investment returns. BioFlux transforms these challenges into competitive advantages by offering the industry's fastest payback and lowest total cost of production through innovative pretreating and hydrotreating processes that simplify refinery integration for HEFA production.

Why Bioflux

Minimize risks

- Production flexibility between SAF and renewable diesel
- Process that optimizes refinery asset utilization

Fast process implementation

- Extending licensor scope to supply of modular units
- From engineering design to startup as soon as 18 months

Lowest SAF cost of production
