

Lifting Station Type ABS Synconta 700

Synthetic prefabricated sump, designed as a single pumping station for the effective dewatering of buildings and areas below the sewer level. Designed as a complete wastewater sump for internal (above-ground), or external (below-ground) installation, and for fitting with selected pumps from the Piranha range. Synconta 700 is suitable also for the pumping of sewage containing faecal matter.

Features

- Robust construction with lockable hollow lid which can be foam-filled for added insulation.
- For external installation a special cast iron sump cover is required for protection against overhead traffic (in accordance with EN 124; Group 1 permissible traffic tonnage 5 kN/m²). Must be sourced locally.
- Stainless steel discharge pipe with 11/4" external thread.
- Single DN 100 inflow port for DIN push-on connection. One port DN 70 for venting and use as a cable duct (supplied as standard with plug/cable inlet seal).
- Available with optional polystyrene jacket to insulate against noise and excessive external temperatures.
- Simple pump installation and maintenance. The pump seals automatically onto the discharge line when lowered into the high-level coupling.
- Automatic pump and level control by pressure sensor system (Piranha-S) or KS float switch (Piranha 09).
- Maximum allowable temperature of medium 40 °C, short term to 60 °C (max. 5 minutes).

Installation

Attention to the backwash level is of vital importance for effective dewatering. All outflow points located below the backwash level must be protected against back flow according to EN 12056 standard.

1. Backwash level.

Discharge pipe. Must rise above backwash level before entering sewer line.
External ventilation pipe.

Rooms for sewage lifting stations must be large enough that a working area of at least 60 cm width or height is available around all parts which have to be operated or maintained.

Tank

Synthetic, corrosion-resistant tank supplied as standard with plastic lid, discharge pipework and coupling with non-return ball valve. Pump, pressure sensor, control panel, sump cover and insulation jacket are not included.

Capacity: 190 liters.

Weight: 35 kg (includes installation pipework but not weight of pump).

Motor

Water pressure sealed, squirrel cage 2-pole induction motor, with double shaft seals and oil chamber.

Insulation: Class F (155 °C)

Protection type: IP68

Pump type

Submersible grinder pump type ABS Piranha with shredding system hydraulics which can cut and pump wastewater containing solids through small diameter discharge lines from 1¼".
