1 a

Confirm alarm

Level -0,87 m
Not Ackn. Alarm ↵

Reason for the alarm:
missing / not connected sensor

ESC

1 b

Phase Error
Not Ackn. Alarm ↵

Reason for the alarm:
wrong rotating field (change phase)

ESC

Explanation of symbols:

turn right = ↶

turn left = ↷

enter (Save occurs) = ↵

back to main menu = ESC

Reset to factory settings:

back to main menu => ESC

press ESC and Enter together,
longer as 5 sec.

Action field:
Please enter stated or rather desired value / enter a command of rather modify.

2 Connection of an analogue sensor, for example a HSC2-sensor including the appropriate basic settings, with or without EX.

Connection

Table 2 Settings

5	Sensor type	Selection sensor	
	Analogue sensor, for example HSC2		
6	Analogue mA1		↻
	Scaling 100% = xx,x m	Enter end value of sensor turn until value HSC2 correspond, for example 4,0 m. Set to 4,0 m	↻ ↻ ↻

9 Connection of one float for "back up start" without EX, for high water (for example with a HSC2 sensor).

Connection

Table 9 Settings

In case of using an additional float switch (Normally closed) as max. alarm, pos.13 has to be adapted as follows. The settings are valid for following level control variations:

- Analogue sensor (HSC2)
- Pressure pipe with or without compressor for air bubbling
- Air bell

Please note that this connection variation is only valid for none Ex pumps.

			P1 back up start [On]	↑
	P2 back up start	[Off]	Change	↑
			P2 back up start [On]	↑
	Back up run time	[30 s]	Pumps will stop after xxx sec. after alarm float switch has switched off.	↑
			Value depends on facility and has to be checked.	↑
			Attention:	
			Make sure that pump will not suck air!	

10 Connection of one float switch for "back up start" with EX, for high water (for example with a HSC2Ex sensor).

Connection

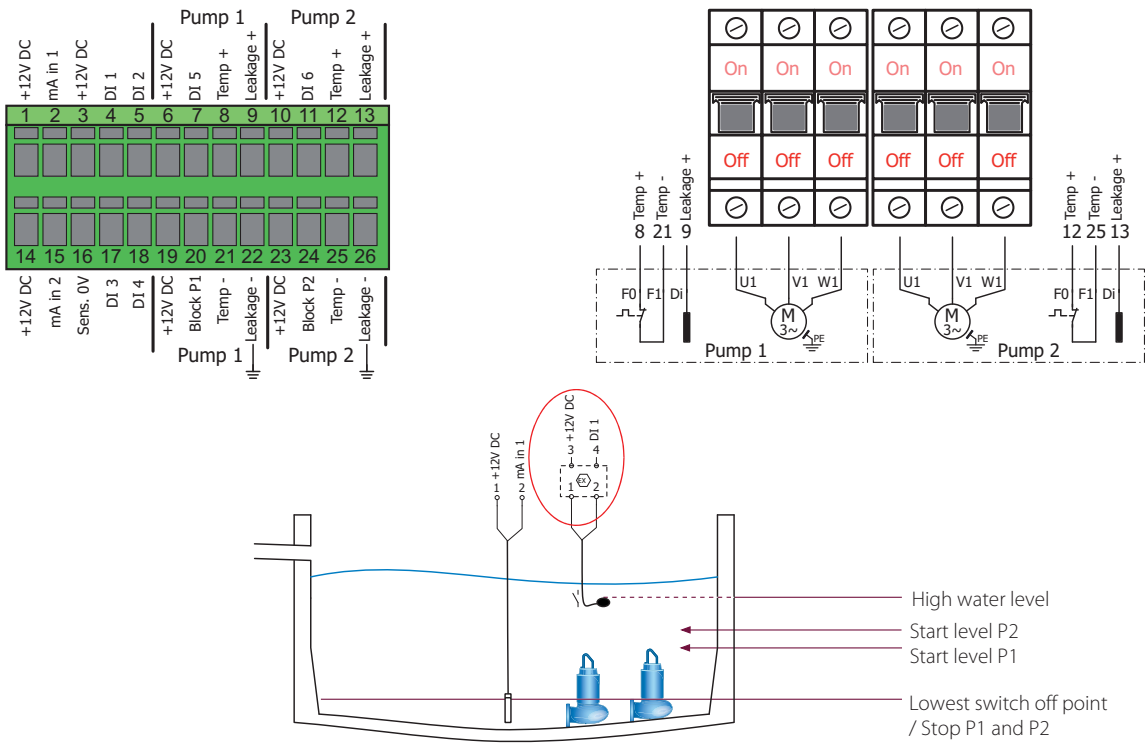

Table 10 Settings

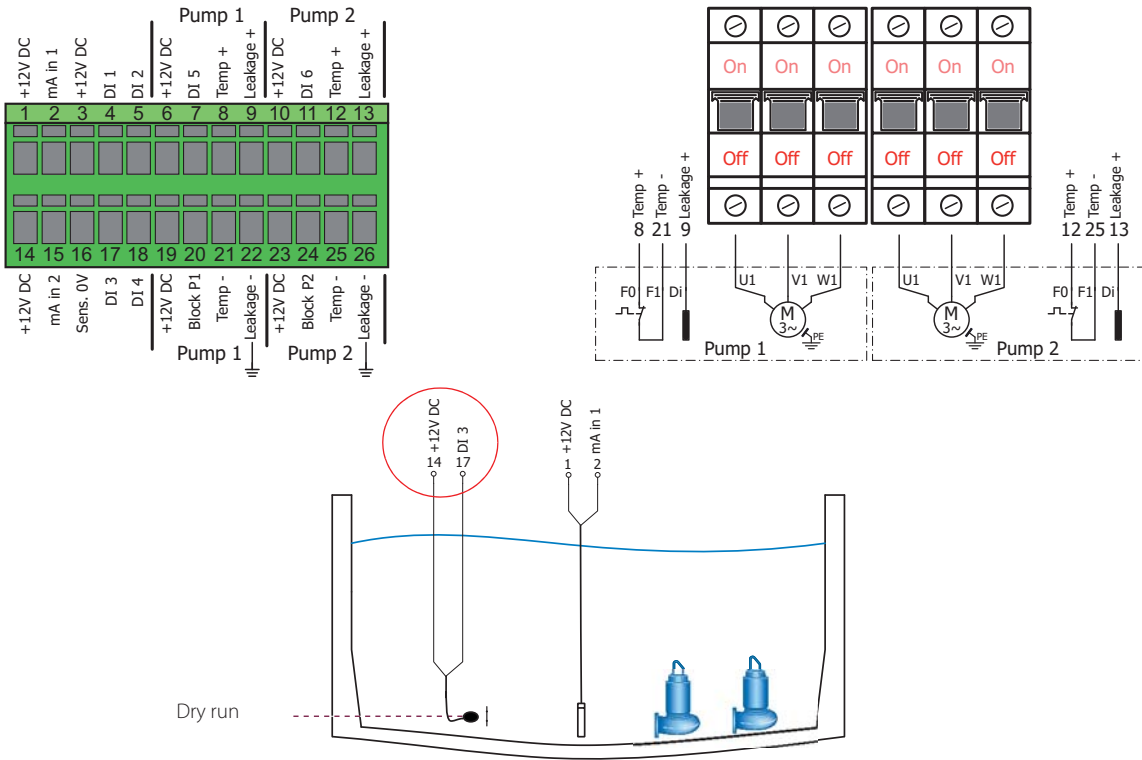

In case of using an additional float switch (Normally closed) as max. alarm, Pos.13 -"back up start" has to be adapted as follows. The settings are valid for following level control variations:

- Analogue sensor (HSC2Ex)
- Pressure pipe with or without compressor for air bubbling
- Air bell

13	P1 back up start	[Off]	Change	↑
			P1 back up start [On]	↑
				↑
	P2 back up start	[Off]	Change	↑
			P2 back up start [On]	↑
				↑
	Back up run time	[30 s]	Pumps will stop after xxx sec. after alarm float switch has switched off.	↑
			Value depends on facility and has to be checked.	↑
			Attention:	↑
			Make sure that pump will not suck air!	↑

11 Connection of dry run protection (for example of an analog sensor HSC2) without EX.

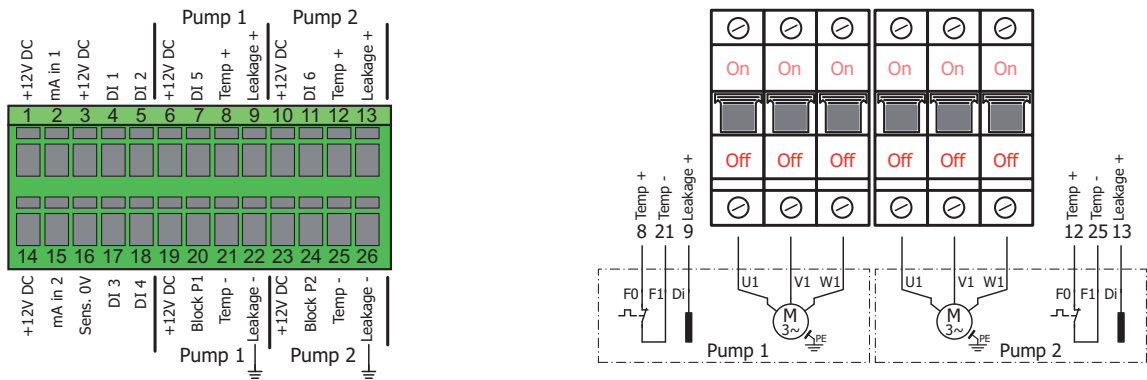

Connection

NOTE: No need to change the menu. The dry run float switch will be active after it is connected. The float switch has to be normally closed.

12 Connection of dry run protection (for example of an analog sensor HSC2Ex) according ATEX at the Ex area.

Connection

NOTE: No need to change the menu. The dry run float switch will be active after it is connected. The float switch has to be normally open.

Attention: If a pump station is operated in a hazardous environment, in accordance with the ATEX Directive 1999/92/EC (Zone declaration has to be done by the user), an additional **dry run float switch** is required.
