

SULZER

Service Kit for Sulzer CPT ANSI Pumps

Each time a pump is serviced it is necessary to replace o-rings, gaskets, bearings and other small parts. To make the work of servicing easier and faster, these parts should be readily available and easily identifiable.

Sulzer has developed service kits for pumps to simplify service tasks, such as servicing a bearing unit. All the o-rings, gaskets and other small parts required for a specific service task on one pump are in one package, clearly marked with its own unique identification number, the product type, size and the specific service task. Purchasing is

simplified as a single number replaces a list of numbers and descriptions for items in the kit.

Sturdy packaging and clear marking make the service kits easy to store and easy to use. The packaging protects the individual items from damage and can be recycled after use.

New genuine spare parts, including gaskets and o-rings, should always be used when servicing a pump. This ensures the reliability, and reduces the lifetime costs of the serviced equipment.

Key Benefits for the Customer

- Pump service based kits including all the necessary parts in one package
- Easy to identify and use
- Easy to specify and order
- Easy to store
- Saves time and costs in maintenance and purchasing
- Reduced inventories and costs
- Recyclable packaging
- Original spare parts ensure compatibility and reliability and reduce lifetime costs
