Starting method and motor protection

XJ 110 AT: Direct on line start (DOL 575 V) with built in AquaTronic unit, which automatically adjusts phase order by dual contactors, ensuring correct motor rotation.

Soft start (460 V) is built in with the AquaTronic unit, where three thyristors reduces start current to three times the nominal current.

Here two relays ensure correct motor rotation.

The AquaTronic unit monitors motor temperature, by use of NTC thermistors built into stator windings, and stops the motor at high temperature. It will also stop the motor at high amperage or if a phase is missing.

XJ 110: Direct on line start with built in contactor. Pumps to be used with VFD must have terminal block instead of contactor.

Thermal switches (284 °F, ±5) built into the stator windings are connected to the contactor and stop the pump at high temperature.

Power cable

Heavy duty power cable for submersible pump applications.

65 ft AWG 8/4 W (UL, CSA, MSHA) 208, 230 and 460 V

65 ft AWG 10/4 SOOW (UL, CSA, MSHA) 575 V

Shaft seal

Double mechanical seal in oil bath.

Primary seal: Silicon carbide on silicon carbide.

Secondary seal: Silicon carbide on carbon.

** Max measurement based on largest discharge size.
