Starting method and motor protection

XJC 110 AT: Soft start (380-460 V) is built in with the AquaTronic unit, where three thyristors reduces start current to three times the nominal current. Here two relays ensure correct motor rotation. The AquaTronic unit monitors motor temperature, by use of NTC thermistors built into stator windings, and stops the motor at high temperature. It will also stop the motor at high amperage or if a phase is missing.

XJC 110: Direct on line start with built in contactor. Pumps to be used with VFD must have terminal block instead of contactor. Thermal switches (140 °C/284 °F, ±5) built into the stator windings are connected to the contactor and stop the pump at high temperature.

 3x6+3x6/3E+3x1.5 (3 control cables included) (230, 380, 460 and 575 V or terminal block)

Shaft seal

Double mechanical seal in oil bath.
 Primary seal: Silicon carbide on silicon carbide.
 Secondary seal: Silicon carbide on carbon.

Bearings
